Foreword	7
1 Introduction	9
1.1 Motivation	9
1.2 Overview	12
I THEORY	13
2 Collective Intelligence	15
2.1 What is it?	15
2.2 Properties	18
2.3 Modelling	20
2.3.1 Basics	21
2.3.2 Internal Models	22
2.3.3 Diversity	23
2.3.4 Non-determinism	23
2.3.5 Adaptivity	24
2.4 Studying	25
2.4.1 Analysis Studies	25
2.4.2 Design Studies	26
2.5 Summary	27
3 Simulation, Models and Algorithms	29
3.1 Simulation	29
3.1.1 Types of Simulation	30
3.1.2 Methodology	32
3.1.3 Distributed Simulation	33
3.1.4 Versus Empirical Experiments	34
3.1.5 Evolutionary Simulation Models	34
3.2 Models	35
3.2.1 Cellular Automata	35
3.2.2 Multi-Agent Based Systems	36
3.2.3 Boolean Networks	37
3.2.4 <i>NK</i> -Model	38
3.2.5 Particle-Based Models	39
3.2.6 Game and Decision Theory	41
3.2.7 Formal Logics	41

3.2.8	Knowledge Systems	43
3.3	Algorithms	43
3.3.1	Evolutionary Methods	43
3.3.2	Co-evolution	44
3.3.3	Learning Classifier Systems	45
3.3.4	Neuro-Evolution	46
3.3.5	COIN	47
3.3.6	Particle Swarm Optimisation	48
3.4	Summary	48
 II CASE STUDIES		 51
4	Analysis of Collective Intelligence	53
4.1	Social Sciences	54
4.1.1	Schelling Segregation	54
4.1.2	Growing Artificial Societies	55
4.1.3	Artificial Anasazi	58
4.1.4	Human Learning Environments	59
4.2	Biological Sciences	61
4.2.1	Primate Dominance Interaction	62
4.2.2	Self Organised Patchiness	65
4.2.3	Division of Labour	66
4.3	Economic Sciences	68
4.3.1	Agent-based Computational Economics	68
4.3.2	Iterated Prisoner's Dilemma	69
4.3.3	Ecological Economics	69
4.4	Science of Philosophy	70
4.4.1	Shared Extended Mind	70
4.4.2	Altruism	71
4.5	Summary	72
 5	 Design of Collective Intelligence	 75
5.1	Collective Robotics	75
5.1.1	Swarm Robotics	76
5.1.2	Evolutionary Robotics	77
5.1.3	Cooperative Robotics	78
5.2	Computer Networks	79
5.2.1	Peer-to-Peer Protocols	79
5.2.2	Self-star Properties	81
5.2.3	Grid Computing	81
5.2.4	Autonomic Computing	82
5.3	Insect-based Computing	83
5.3.1	Package Routing	83
5.3.2	Paintbooth Scheduling	85
5.3.3	Data Clustering	86
5.4	Agent-based Computing	88

5.4.1	Automated Negotiation	89
5.4.2	Trust and Reputation	89
5.4.3	Computational Mechanism Design	89
5.5	Games and Movies	90
5.5.1	RoboCup	90
5.5.2	SimCity	91
5.5.3	SPORE	91
5.5.4	Evolving Creatures	91
5.5.5	Crowd Simulation	92
5.6	Summary	93
III HOWTO		95
6	Research Methodology	97
6.1	Research	99
6.1.1	Literature	99
6.1.2	Objectives	100
6.1.3	Questions	101
6.1.4	Hypotheses	101
6.2	Model	103
6.3	Implementation	103
6.4	Experiment	105
6.4.1	Design	105
6.4.2	Setup	109
6.4.3	Performing the Experiment	109
6.4.4	Results	110
6.4.5	Output Analysis	111
6.4.6	Validation	114
6.5	Summary	115
7	Writing a Research Report	117
7.1	Overview	119
7.2	Abstract	120
7.3	Introduction	120
7.4	Literature	121
7.5	Model	122
7.6	Implementation	122
7.7	Experiments	123
7.8	Conclusions	125
7.9	Bibliography	125
7.10	Summary	126

IV	APPENDICES	127
A	Software	129
A.1	Swarm	130
A.2	RePast	130
A.3	NetLogo	130
A.4	Newties	131
A.5	Breve	131
A.6	Mason	131
A.7	Starlogo	132
A.8	FramSticks	132
A.9	Ascape	133
A.10	CORMAS	133
A.11	MOISE+	133
A.12	AgentSheets	133
A.13	LEADSTO	134
A.14	SDML	134
B	Projects	135
B.1	House Sparrows	136
B.2	Emperor Penguins	137
B.3	Honeybee Colony Migration	138
B.4	Brood Sorting in Ants	139
B.5	The Evolution of Circadian Rhythms	140
B.6	Epidemic Modelling	141
B.7	Biological Pattern Formation	142
B.8	Small-World Networks	143
B.9	The Art-Gallery Problem	144
B.10	Multi-Asset Surveillance	145
B.11	Cellular Chitchats	146
B.12	Puckscape	147
B.13	Artificial Societies - Poisonous Food	148
B.14	Artificial Societies - Path Following	149
B.15	Artificial Societies - Development of Norms	150
